JEL Classification: I1 - Health

Keywords:

Health economics

Medicine

Econometrics

Epidemiology

Salary Range: \$72,000 - \$134,000

Full Text of JOE Listing:

The team lead by Pascal Geldsetzer at Stanford University is looking for a talented researcher with experience in econometric/quasi-experimental approaches for causal effect estimation (e.g., regression discontinuity and difference-in-differences) to help us

expand our work on the link between shingles vaccination and dementia/cognition (see: <https://www.medrxiv.org/content/10.1101/2023.05.23.23290253v1>). Data sources for our work in this area are large-scale electronic health record data, medical claims data, mortality registries, and epidemiological cohort studies. The researcher will be expected to publish in high-impact general science and clinical journals.

We are looking for someone to start as soon as possible but there is no specific deadline for the application – we hire on an ongoing basis. Part-time and remote working options are possible. We also partner with Heidelberg University for candidates interested in being based in Germany.

Required Qualifications:

- Doctoral degree with quantitative training (ideally in econometrics) or relevant research experience.
- Strong coding skills in R, Stata, or other statistical software package.
- Good communication skills in English.

We will also consider candidates with a Masters degree that includes strong quantitative training.

This is a two-year position with strong possibility of renewal.

Enquiries: Pascal Geldsetzer, pgeldsetzer@stanford.edu

Application Requirements:

- Application Instructions Below

Application deadline: 01/31/2024

Application Instructions:

Please send a CV (no cover letter or letters of reference required) by email to pgeldsetzer@stanford.edu.
